Process Improvements

**Step 1-1B: Streamline Permitting**

Create a permit checklist summarizing the necessary regulatory steps

A permit checklist guides an installer or other interested party through the permitting process by clearly stating all the necessary types of plan review and required permits. At its most basic level, a permit checklist only outlines the sequential steps of the permitting process; a more comprehensive checklist will also include applicable standards for each step in the review process.

The basic checklist should include all of the information that an individual jurisdiction will require in order to permit a solar installation. For this reason, content tends to vary according to local context. For example, a denser, more urban city may require a site plan showing adequate setbacks, while a more rural area may not. Regions with extreme winter weather may require more detailed information regarding panel weights and roof loads than jurisdictions without such weather. Overall, a basic checklist may require information from the applicant such as:

- Age of structure
- Roof type and material
- Roof structural elements
- Weight of solar panel arrays
- Type of solar panel mounting hardware

It may also require electrical information from the applicant, such as:

- Line diagram of electrical system (array configuration and wiring, grounding, points of interconnection, etc.)
- Array information (number of modules in series, voltage, current, etc.)

Plans may be required, such as:

- Site plan showing location of building in relation to street and property lines
- Structural plans demonstrating sufficient support and uplift of photovoltaic panels

Professional engineer’s stamps may be required from:

- Electrical engineers
- Structural engineers

Other required information may include:

- Manufacturer’s cut sheets for all components
- Signage requirements
- List of all equipment and components

Jurisdictions interested in drafting their own checklists must start with a review of their own local regulations. The examples below are helpful points of reference, but since the local context of each jurisdiction is different, there is no one-size-fits-all approach.

**Examples**

*City of Dallas, Texas: Solar Panel Water Heater or Other Photovoltaic Systems Application Checklist and Required Documents*

Dallas uses the same checklist for all photovoltaic systems, whether residential or commercial, hot water or electrical. It includes a notice requiring the applicant to agree to comply with any applicable private deed restrictions. The information gathered deals primarily with the type of system being installed and its location on the project site. For commercial installations, more detailed construction plan documents are required than for residential installations.

*City of Orlando, Florida: Solar Submittal Checklist for Solar Thermal or Solar Photovoltaic*

Similar to Dallas, this checklist is used for residential, commercial, hot water and electrical photovoltaic systems. The checklist requires information related to the technical specifications of the system and a roof plan. The checklist also provides details regarding what is required as part of a system inspection.

www.cityoforlando.net/permits/pdfs/SOLAR_PLANS_SUBMITTAL_CHECKLIST.pdf

*City of Richland Hills, Texas: Solar Panel System Checklist*

Richland Hills uses this checklist, not only as a resource for installers, but also for plan reviewers, to reduce the likelihood of missing information. For each required item, the applicant must initial each line, sign and date. This checklist is applicable to both residential and commercial installations. Compared with other jurisdictions, this checklist goes into slightly greater detail regarding the information needed to meet each requirement.

Clay County, MO  3 copies  Kansas City, MO  2 copies  Lee’s Summit, MO  3 copies  Johnson County, KS  3 copies  Olathe, KS  1 hard copy

If plans are larger than 11x17, submit electronic copy in .PDF or .TIF format.
Example 2 - Photovoltaic System Application Checklist

Photovoltaic System Application Checklist and Required Documents
By checking each requirement, you are stating that you have supplied correct and complete information. In the event that the required information is not contained in the submitted documents, you will be notified of the deficiency. Failure to supply the additional requested information within five (5) working days after notification may result in your application being delayed and eventually discarded. A new application, the original application, complete plans and a new checklist will be required for re-submittal for plan review. This re-submittal will be treated as a new application and will be processed in the order of receipt. Complete the information sheet attached.

General Requirements

1. Type of Application
   - [ ] Residential
   - [ ] Commercial

2. All construction documents and plans for the installation of the photovoltaic system have been reviewed or designed, and sealed by a licensed professional engineer to comply with [applicable code]. [Two/three] sets submitted.

3. Completed permit application(s) and supplemental information sheet(s), if required.

4. The applicant has verified that the proposed installation complies with any Zoning, Planned Development District, Historic Districts and Conservation Districts. Subject to plan review.

5. The applicant will comply with other restrictions the [Jurisdiction name] may not enforce, such as private deed restrictions.

6. Copy of the Net Metering/Interconnection Application Approval Acknowledgement. (See Appendix 3: Net Metering/Interconnection Application Approval Acknowledgement.)

Residential Application Requirements

1. Photovoltaic application and fee.

2. [Two (2) copies] of inverter manufacturer’s specifications.

3. [Two (2) copies] of photovoltaic system module manufacturer specifications.

4. [Two (2) copies] of manufacturer’s installation instructions.

5. Equipment must be listed and labeled. Signage details to be provided.

6. Number of solar panels to be installed: [ ]

7. Location of solar panels. A site plan may be required (refer to commercial requirements): [ ]

8. A roof plan that shows the existing condition and location of proposed equipment.

9. Building elevations showing the total building height with the proposed equipment.

10. Engineered construction documents or sealed assembly/installation plans of the photovoltaic system.

11. Engineering construction documents of the photovoltaic systems’ connection to the structure of the building. Construction documents shall include, but are not limited to, framing plans, connection details to the building and any structural calculations or load diagrams.

12. Line diagram showing the array configuration, array wiring, combiner/junction box, conduit/wiring from array to inverter, DC grounding system, disconnecting means, inverter, conduit/wiring from inverter to utility point of connection, AC grounding and system grounding, point of connection attachment method.
Commercial Application Requirements

☐ 1. Photovoltaic application and fee.

☐ 2. Building code information about the building the photovoltaic system will be attached to, if applicable.
   - Occupancy group ____________  Number of stories ____________
   - Construction type ____________  Fire sprinkler system (select for fully-sprinklered buildings only)

☐ 3. * Two copies of equipment manufacturer’s specifications and installation instructions (panel and inverter).

☐ 4. * Equipment must be listed and labeled. Signage details to be provided.

☐ 5. Number of photovoltaic panels to be installed: ____________

☐ 6. Location of solar panels: ____________

☐ 7. [Two (2)] sets of fully dimensioned construction plans of the following drawn to scale and legible:
   - A detailed site plan that shows all property lines indicating length, metes and bounds, building lines, easements and north arrow. Also, show the location of existing structures and proposed solar system equipment.
   - A roof plan that shows the existing mechanical and plumbing venting and intakes, and location of proposed equipment.
   - Building elevations showing the total building height with the proposed equipment.
   - Engineered construction documents or sealed assembly/installation plans of the photovoltaic system.
   - Engineered construction documents of the photovoltaic systems’ connection to the structure of the building, if applicable. Construction documents shall include but are not limited to, framing plans, connection details to the building, and any structural calculations or load diagrams. (See Appendix 2: Structural Worksheet WKS1, page 6)
   - Line diagram showing the array configuration, array wiring, combiner/junction box, conduit/wiring from array to inverter, DC grounding system, disconnecting means, inverter, conduit/wiring from inverter to utility point of connection, AC grounding and system grounding, point of connection attachment method.

Notes

- All documents submitted for review must have a minimum text size of 3/32” and a minimum drawing sheet size of 11”x17” and a maximum drawing sheet size of 36”x48”, “E” size.
- Additional information required by the Building Official may be necessary for the issuance of the permit [reference ordinance].

* Indicates items required for both the Net Metering/Interconnection Application and the Permit Application.
Example 3 - Photovoltaic System Review

Review of Photovoltaic System

Structural Review of PV Array Mounting System

Is the array to be mounted on a defined, permitted roof structure? □ Yes □ No

*If No due to non-compliant roof or a ground mount, submit completed Structural Worksheet – WKS1.*

Roof Information:

1. Roof Age: Structure: □ < 5 yrs □ 5-10 yrs □ 20-30 yrs □ 30+ yrs
   Covering: □ < 5 yrs □ 5-10 yrs □ 20-30 yrs □ 30+ yrs

2. Is the roofing type lightweight (Yes = composition, lightweight masonry, metal, etc...) ________________
   *If No, submit completed Structural Worksheet – WKS1. (No = heavy masonry, slate, etc...)*

3. Does the roof have a single covering? □ Yes □ No
   *If No, submit completed Structural Worksheet – WKS1.*

4. Provide method and type of weatherproofing roof penetrations (e.g. flashing, caulk)

Mounting System Information:

1. Is the mounting structure an engineered product designed to mount PV modules with no more than 18” gap beneath the module frames? □ Yes □ No
   *If No, provide details of structural attachment certified by a design professional. Must include design for uplift including system to rafter detail.*

2. For manufactured mounting systems, fill out information on the mounting system below:
   a. Mounting System Manufacturer ________________ Product Name & Model # ________________
   b. Total Weight of PV Modules and Rails __________ lbs
   c. Total Number of Attachment Points ________________
   d. Weight per Attachment Points (b ÷ c) __________ lbs *(if greater than 45 lbs. see WKS1)*
   e. Maximum Spacing Between Attachment Points on a Rail ________________ inches
   See product manual for maximum spacing allowed based on maximum design wind speed
   f. Total Surface Area of PV Modules (square feet) ________________ ft²
   g. Distributed Weight of PV Module on Roof (b ÷ f) ________________ lbs/ft²
      *If distributed weight of the PV system is greater than 5 lbs/ft² see Structural Worksheet – WKS1.*
   h. Mounting Frame to Rafter Framing: □ Self-ballasted □ Penetrating
      If penetrating, please provide for fasteners:
      Type: ________________ Size: ________________ Number: ________________ Spacing: ________________ inches

Electrical Review of PV System (Calculations for Electrical Diagram)

In order to a PV system to be considered for an expedited permit process, the following must apply:

1. PV modules, utility-interactive inverters, and combiner boxes are identified for use in PV systems.
2. The PV array is composed of 4 series strings or less per inverter.
3. The ac interconnection point is on the load side of service disconnecting means (690.64(B))
4. A standard electrical diagram can be used to accurately represent the PV system.

Source: Solar ABCs Expedited Permit Process for PV Systems
Structural Worksheet – WKS1
Complete only if previous Structural Review questions ask for Structural Worksheet – WKS1 information.

If array is roof mounted:
This section is for evaluating roof structural members that are site built. This includes rafter systems and site built trusses. Manufactured trusses and roof joist systems, when installed with proper spacing, meet the roof structure requirements covered in item 2 below.

1. Roof Construction:  □ Rafters  □ Trusses  □ Other: __________________________
2. Describe site-built rafter or other site-built truss system:
   a. Rafter Size: _______________ x _______________ inches
   b. Rafter Spacing: __________________ inches
   c. Maximum unsupported span: ____________ feet, ____________ inches
   d. Are the rafters over-spanned? (see the IRC span tables on the next page)  □ Yes  □ No
   e. If Yes, complete the rest of this section.
3. If the roof system has:
   a. over-spanned rafters or trusses
   b. the array over 5 lbs/ft² on any roof construction, or
   c. the attachments with a dead load exceeding 45 lbs per attachment;

   it is recommended that you provide one of the following:
   i. A framing plan that shows details for how you will strengthen the rafters using the supplied span tables on the next page. This will include all supporting load paths.
   ii. Confirmation certified by a design professional that the roof structure will support the array.

If array is ground mounted:
1. Show array supports, framing members, and foundation posts and footings.
2. Provide information on mounting structure(s) construction. If the mounting structure is unfamiliar to the local jurisdiction and is more than six (6) feet above grade, it may require engineering calculations by a design professional.
3. Show detail on module attachment method to mounting structure. Gravity loads and wind uplift must be addressed by design.

Source: Solar ABCs Expedited Permit Process for PV Systems
Structural Worksheet: Span Tables

A framing plan is required only if the combined weight of the PV array exceeds 5 pounds per square foot (PSF or lbs/ft²) or the existing rafters are over-spanned. The following span tables from the 2009 International Residential Code (IRC) can be used to determine if the rafters are over-spanned. For installations in jurisdictions using different span tables, follow the local tables.

Span Table R802.5.1(1),

Use this table for rafter spans that have conventional light-weight dead loads and do not have a ceiling attached.

<table>

<td>17-11</td>
</tr>
</tbody>
</table>

Use the conventional light-weight dead load table when the existing roofing materials are wood shake, wood shingle, composition roofing, or light-weight tile roofs. (The rationale for allowing these tables to be used is that the installation of a PV system should be considered part of the live load, since additional loading will not be added to the section of the roof where a PV array is installed.)

Where heavy roofing systems exist (e.g. clay tile or heavy concrete tile roofs), use the 20 lbs/ft² dead load tables.
